

# COW SIGNALS<sup>®</sup>

*learn & earn*

**Happy cows,  
Happy farmers**

**Cows give out signals about their health and well-being.  
What can you do better? Just ask the cow...she can tell you!  
After all, a HEALTHY COW is a PROFITABLE COW.  
Our keep-it-simple approach starts with: LOOK, THINK and ACT.**

SBScibus have CowSignals Certified Master Trainers.

Our trainers can provide you with in-depth knowledge and teach you the skills of the CowSignals concept.

## CowSignals Training Course:

A program designed for farmers and advisors in the dairy sector to gain knowledge on how to have healthier and happier cows. By doing this we can get our cows to live longer, be more profitable and create a better lifestyle and working pleasure for our farmers.

The program features an interactive presentation on CowSignals and a “hands-on” workshop (standard course is 5 hours and the subjects covered can be modified to suit the farming operation).

**Richard and Charles Bignell, Stroud Dairies, Tasmania (800 cows):**

*We have just completed our first CowSignals Training Course. We have been dairy farming for more than 25 years but we still learned a lot from this course. We can highly recommend the CowSignals course to other dairy farmers and their workforces.*

**Mark Miers, Clovelly Farming Operations, Tasmania (2500 cows):**

*Recognizing that husbandry skills have diminished over the years; this training program will increase cow comfort, animal welfare and profitability over our entire operation.*

*Cows resting at Clovelly*

**Errol and Julie Gerber, Gerber Farms, QLD (700 cows):**

*The CowSignals Training Course has given us and our team of staff the skills and knowledge around improving cow comfort, preventing disease and increasing longevity of our herd.*
